

HOW CORE FEATURES WERE IMPLEMENTED:

DEBT TRACKER:

> According to code, this will ask you for input on your data; asks for the debt of other people to you or the debt of which you owe to others. This was implemented through menu systems with options given to the user, then gone through a list to be displayed later for the user to know their data on following debts (using python).

SPENDING TRACKER:

> According to code, this will also ask for input, but this will go for what you will spend on the budget and amount of money you have at current. This will also be implemented through a menu system with the given functions (using python).

TECHNOLOGIES USED:

- ONLINE COMPILERS (OneCompiler, Programiz): Used for code drafts.
- ONLINE GUIDES (w3schools, youtube, etc.): Used for guidance in creating our codes, implementing them into applications,.
- VSCODE: Used for programming and debugging our final codes.

KEY DESIGN DECISIONS

- Menu type: options pop up.
- Pop-up tips on budgeting
- Blocked out 'tracker/journal plan' form (may change)

REFERENCE TO ETHICAL CONSIDERATIONS IN PROGRAMING CHOICES:

- User compatibility
- possible overstimulating visuals (this should be prevented, must be pleasing to the eye)
- User error checks (if action can be done, etc.)
